General Notation	xi
1 The Fourier Transform on $L^1(\mathbb{R})$	1
1.1 Definition and Basic Properties	1
1.1.1 The Fourier Transform on $L^1(\mathbb{R})$	1
1.1.2 Motivation	5
1.2 Translation, Modulation, Dilation, and Involution	10
1.2.1 Four Fundamental Operators	11
1.2.2 The Riemann–Lebesgue Lemma	13
1.2.3 Position and Momentum	14
1.2.4 The HRT Conjecture	15
1.3 Convolution	16
1.3.1 Some Notational Conventions	17
1.3.2 Definition and Basic Properties of Convolution	18
1.3.3 Young’s Inequality	20
1.3.4 Convolution as Filtering; Lack of an Identity	21
1.3.5 Convolution as Averaging; Introduction to Approximate Identities	22
1.3.6 Convolution as an Inner Product	25
1.3.7 Convolution and Smoothing	26
1.3.8 Convolution and Differentiation	28
1.3.9 Convolution and Banach Algebras	29
1.3.10 Convolution on General Domains	32
1.4 The Duality Between Smoothness and Decay	36
1.4.1 Decay in Time Implies Smoothness in Frequency	36
1.4.2 A Primer on Absolute Continuity	38
1.4.3 Smoothness in Time Implies Decay in Frequency	41
1.4.4 The Riemann–Lebesgue Lemma Revisited	42
1.5 Approximate Identities	46
1.5.1 Definition and Existence of Approximate Identities	46
1.5.2 Approximation in $L^p(\mathbb{R})$ by an Approximate Identity ..	48

1.5.3	Uniform Convergence	52
1.5.4	Pointwise Convergence	53
1.5.5	Dense Sets of Nice Functions	54
1.5.6	The C^∞ Urysohn Lemma	55
1.5.7	Gibbs's Phenomenon	56
1.5.8	Translation-Invariant Subspaces of $L^1(\mathbb{R})$	57
1.6	The Inversion Formula	60
1.6.1	The Fejér Kernel	60
1.6.2	Proof of the Inversion Formula	62
1.6.3	Summability	65
1.6.4	Pointwise Inversion	67
1.6.5	Decay and Smoothness Revisited	69
1.7	The Range of the Fourier Transform	72
1.8	Some Special Kernels	74
1.9	The Schwartz Space	79
1.9.1	Definition and Basic Properties	80
1.9.2	Topology and Convergence in the Schwartz Space	80
1.9.3	Invariance of the Schwartz Space	81
2	Fourier Series and the Abstract Fourier Transform	85
2.1	The Abstract Fourier Transform	85
2.1.1	Examples of Locally Compact Abelian Groups	85
2.1.2	Characters and the Fourier Transform	87
2.1.3	The Fourier Transform on LCA Groups	90
2.2	Fourier Series and Approximate Identities on the Torus	92
2.2.1	Partial Sums and the Dirichlet and Fejér Kernels	96
2.2.2	Approximate Identities	99
2.2.3	Cesàro Summability and the Inversion Formula	101
2.3	Completeness and the L^2 -Theory	106
2.3.1	Completeness	106
2.3.2	The L^2 Theory	107
2.3.3	Minimality	108
2.4	Weyl's Equidistribution Theorem	112
2.5	Basis Properties of the Trigonometric System	115
2.5.1	Schauder Bases and the Partial Sum Operators	116
2.5.2	The Symmetric Partial Sum Operators and Their Relatives	118
2.6	The Conjugate Function and Norm Convergence of Fourier Series	122
2.7	Pointwise Convergence	127
2.8	The Poisson Summation Formula	136
2.9	Wiener's Lemma	138
2.10	Wiener's Tauberian Theorem	141
2.11	Ideals	144

3	The Fourier Transform on $L^2(\mathbb{R})$	149
3.1	Definition and Basic Properties of the Fourier Transform on $L^2(\mathbb{R})$	149
3.2	The Hermite Functions	156
3.2.1	Construction of the Hermite Functions	156
3.2.2	Wiener's Definition of the Fourier Transform on $L^2(\mathbb{R})$	159
3.3	The Fourier Transform on $L^p(\mathbb{R})$	161
3.4	The Classical Uncertainty Principle	165
3.4.1	Concentration and the Statement of the Classical Uncertainty Principle	165
3.4.2	Simultaneous Approximation and Smoothness versus Decay	168
3.4.3	Proof of the Classical Uncertainty Principle	171
3.4.4	Additive Form of the Uncertainty Principle	172
3.4.5	Operator-Theoretic Proof of the Uncertainty Principle	174
3.4.6	Hermite Function Proof of the Uncertainty Principle	174
3.4.7	A Local Uncertainty Principle	175
3.5	The Paley–Wiener Theorem	176
3.5.1	Motivation	177
3.6	A Primer on Hilbert–Schmidt Operators	182
3.7	The Donoho–Stark Uncertainty Principle	183
3.7.1	Concentration and Essential Support	184
3.7.2	Products of Time- and Frequency-Limiting Operators	185
3.7.3	The Donoho–Stark Uncertainty Principle	186
3.7.4	Size of the Supports	187
3.8	Energy Concentration	189
3.8.1	Time-Frequency Limiting Operators	189
3.8.2	Restatement of the Problem	191
3.8.3	Time-Frequency Limiting Operators and the Spectral Theorem	192
3.8.4	Double Orthogonality	193
3.8.5	Prolate Spheroidal Wave Functions	194
3.8.6	Behavior of the Eigenvalues	195
3.8.7	The Space of Band- and Time-Limited Functions	197
3.8.8	The Range of Time-Frequency Concentrations	199
4	Distributions	205
4.1	Motivation and Notation	206
4.1.1	Notation for Functionals	207
4.2	Convergence and Continuity	209
4.2.1	Examples of Spaces Defined by Seminorms	209
4.2.2	Convergence and Topology	211
4.2.3	From Convergence to Metrics	212
4.2.4	Continuity Equals Boundedness	216
4.3	Distributions of Various Sorts	217

4.3.1	The Schwartz Class and the Space of Tempered Distributions	218
4.3.2	$C^\infty(\mathbb{R})$ and the Space of Compactly Supported Distributions	219
4.3.3	Convergence in $C_c^\infty(\mathbb{R})$	221
4.3.4	The Space of Distributions	222
4.3.5	Inclusions	225
4.3.6	Convergence of Distributions	226
4.4	Functions as Distributions	229
4.4.1	Locally Integrable Functions	230
4.4.2	Functions with Polynomial Growth	232
4.4.3	Compactly Supported Functions	234
4.5	Operations on Distributions	235
4.5.1	Translation, Modulation, Dilation, Conjugation, and Involution	235
4.5.2	Products of Distributions with Smooth Functions	238
4.5.3	Convolution of Distributions with Smooth Functions	238
4.5.4	Convolution and Translation-Invariant Operators	243
4.6	Support	246
4.6.1	Definition and Basic Properties	246
4.6.2	Compactly Supported Distributions	248
4.6.3	Convolution of Distributions	250
4.7	Differentiation	251
4.7.1	Definition and Basic Properties	251
4.7.2	A Relation between Classical and Distributional Differentiation	253
4.7.3	Distributions and Derivatives of Continuous Functions	257
4.7.4	Distributions Supported at a Point	258
4.8	The Fourier Transform of Tempered Distributions	261
4.8.1	Definition of the Distributional Fourier Transform	262
4.8.2	Basic Properties of the Fourier Transform	263
4.8.3	The Paley–Wiener Theorem for Tempered Distributions	264
4.8.4	The Distributional Poisson Summation Formula	266
4.8.5	The Hilbert Transform	267
4.9	Sobolev Spaces	272
4.9.1	Definition and Basic Properties	272
4.9.2	Sobolev Spaces and Distributional Derivatives	274
4.9.3	Duality	275
4.9.4	The Sobolev Embedding Theorem	276
5	Measures	279
5.1	Borel and Radon Measures on \mathbb{R}	279
5.1.1	Convolution and Linear Time-Invariant Systems	279

A	Lebesgue Measure and Integration	283
	A.1 Exterior Lebesgue Measure	283
	A.2 Lebesgue Measure	284
	A.3 Measurable Functions	286
	A.4 The Lebesgue Integral	288
	A.5 The Dominated Convergence Theorem	291
	A.6 The Lebesgue Differentiation Theorem	292
	A.7 Repeated Integration	292
B	Spaces and Operators	295
	B.1 Metrics and Convergence	295
	B.2 Norms and Seminorms	296
	B.3 Examples of Banach Spaces	298
	B.3.1 The ℓ^p Spaces.....	298
	B.3.2 More Sequence Spaces	299
	B.3.3 The L^p spaces	300
	B.3.4 Some Spaces of Continuous Functions	302
	B.4 Inner Products	303
	B.5 Orthogonality	305
	B.6 Linear Operators on Normed Spaces	306
	B.6.1 Equivalence of Boundedness and Continuity	307
	B.6.2 Isometries and Isomorphisms	308
	B.6.3 Orthogonal Projections	309
	B.6.4 The Space $\mathcal{B}(X, Y)$	309
	B.7 The Dual of a Hilbert Space and Notation for Functionals ...	310
	B.8 The Dual of $L^p(E)$	311
	B.9 Adjoints for Operators on Hilbert Spaces	312
	B.10 Self-Adjoint Operators	313
C	Functional Analysis on Banach Spaces	315
	C.1 The Hahn–Banach Theorem	315
	C.2 Reflexivity	317
	C.3 Adjoints of Operators on Banach Spaces.....	318
	C.4 The Baire Category Theorem	319
	C.5 The Uniform Boundedness Principle	320
	C.6 The Open Mapping Theorem	321
	C.7 The Closed Graph Theorem	323
	C.8 Weak and Weak* Convergence	323
D	Convergence, Completeness, and Schauder Bases	325
	D.1 Convergent Series	325
	D.2 Unconditional Convergence	326
	D.3 Span and Closed Span	329
	D.4 Orthonormal Sequences in Hilbert Spaces.....	330
	D.5 Hamel Bases	331

D.6	Schauder Bases	332
D.7	Continuity of the Coefficient Functionals	333
D.8	Minimal and Exact Sequences	335
D.9	Unconditional Bases	337
E	Integral Operators and Hilbert–Schmidt Operators	339
E.1	Compact Operators	339
E.2	The Spectral Theorem	341
E.3	Hilbert–Schmidt Operators	343
E.4	Singular Numbers	343
E.5	Integral Operators	345
E.6	The Hilbert–Schmidt Kernel Theorem	347
F	Complex Analysis and Interpolation	349
F.1	Analytic Functions	349
F.2	Power Series and Taylor Series	350
F.3	Dirichlet Series	351
F.4	Trigonometric Polynomials	352
F.5	Interpolation	352
	Hints for Exercises and Additional Problems	357
	References	375
	Index of Symbols	381
	Index	387
