

Christopher Heil

Metrics, Norms, Inner Products, and Operator Theory

March 8, 2018

Springer

Contents

Preface	xi
1 Notation and Preliminaries	1
1.1 Numbers	1
1.2 Sets	2
1.3 Functions	4
1.4 Cardinality	5
1.5 Sequences	10
1.6 Suprema and Infima	12
1.7 Convergent Sequences of Numbers	14
1.8 Infinite Series of Numbers	16
1.9 Differentiation and The Riemann Integral	18
1.10 Vector Spaces	20
1.11 Span and Independence	25
2 Metric Spaces	31
2.1 Metrics	31
2.2 Convergence and Completeness	42
2.3 Topology in Metric Spaces	52
2.4 Closed Sets	59
2.5 Accumulation Points and Boundary Points	61
2.6 Closure, Density, and Separability	65
2.7 The Cantor Set	72
2.8 Compact Sets in Metric Spaces	74
2.9 Continuity for Functions on Metric Spaces	82
2.10 Urysohn's Lemma	89
2.11 The Baire Category Theorem	92
3 Norms and Banach Spaces	97
3.1 The Definition of a Norm	97
3.2 Examples: The ℓ^p Spaces	101

3.3	The Induced Metric	109
3.4	Banach Spaces	113
3.5	Uniform Convergence of Functions	119
3.6	Equivalent Norms	130
3.7	Norms on Finite-Dimensional Spaces	133
4	Further Results on Banach Spaces	139
4.1	Infinite Series in Normed Spaces	139
4.2	Absolute Convergence of Series	144
4.3	Unconditional Convergence of Series	151
4.4	Span, Closed Span, and Complete Sequences	156
4.5	Independence, Hamel Bases, and Schauder Bases	159
4.6	The Weierstrass Approximation Theorem	165
4.7	The Stone–Weierstrass Theorem	171
4.8	The Tietze Extension Theorem	180
4.9	The Arzelà–Ascoli Theorem	183
5	Inner Products and Hilbert Spaces	189
5.1	The Definition of an Inner Product	190
5.2	Properties of an Inner Product	191
5.3	Examples	196
5.4	Orthogonal and Orthonormal Sets	199
5.5	Orthogonal Complements	201
5.6	Orthogonal Projections and the Closest Point Theorem	202
5.7	Orthogonal and Orthonormal Sequences	208
5.8	Orthonormal Bases	213
5.9	Existence of an Orthonormal Basis	218
5.10	The Real Trigonometric System	223
5.11	The Complex Trigonometric System	234
6	Operator Theory	241
6.1	Linear Operators on Normed Spaces	241
6.2	The Definition of a Bounded Operator	245
6.3	Examples	249
6.4	Equivalence of Bounded and Continuous Linear Operators	255
6.5	The Space $\mathcal{B}(X, Y)$	257
6.6	Isometries and Isomorphisms	262
6.7	Infinite Matrices	268
6.8	The Dual of a Hilbert Space	276
6.9	The Dual of ℓ^p	279
6.10	The Uniform Boundedness Principle	284

7	Operators on Hilbert Spaces	289
7.1	Unitary Operators	289
7.2	Adjoint of Operators on Hilbert Spaces	295
7.3	Self-Adjoint Operators	303
7.4	Compact Operators on Hilbert Spaces	310
7.5	Finite-Rank Operators	315
7.6	Eigenvalues and Invariant Subspaces	318
7.7	Existence of an Eigenvalue	320
7.8	The Spectral Theorem for Compact Self-Adjoint Operators ..	322
7.9	The Singular Value Decomposition	329
7.10	The Singular Value Decomposition of Matrices	333
	Index of Symbols	339
	References	343
	Index	345
