

Christopher Heil

Introduction to Real Analysis

May 14, 2019

Springer

Contents

Preliminaries	1
1 Metric and Normed Spaces	15
1.1 Metric Spaces	15
1.1.1 Convergence and Completeness	16
1.1.2 Topology in Metric Spaces	17
1.1.3 Compact Sets in Metric Spaces	18
1.1.4 Continuity for Functions on Metric Spaces	20
1.2 Normed Spaces	22
1.2.1 Vector Spaces	22
1.2.2 Seminorms and Norms	23
1.2.3 Infinite Series in Normed Spaces	24
1.2.4 Equivalent Norms	26
1.3 The Uniform Norm	27
1.3.1 Some Function Spaces	28
1.4 Hölder and Lipschitz Continuity	31
2 Lebesgue Measure	33
2.1 Exterior Lebesgue Measure	34
2.1.1 Boxes	35
2.1.2 Some Facts about Boxes	36
2.1.3 Exterior Lebesgue Measure	39
2.1.4 The Exterior Measure of a Box	44
2.1.5 The Cantor Set	46
2.1.6 Regularity of Exterior Measure	49
2.2 Lebesgue Measure	52
2.2.1 Definition and Basic Properties	53
2.2.2 Toward Countable Additivity and Closure under Complements	55
2.2.3 Countable Additivity	59
2.2.4 Equivalent Formulations of Measurability	62

2.2.5	Carathéodory's Criterion	64
2.2.6	Almost Everywhere and the Essential Supremum	66
2.3	More Properties of Lebesgue Measure	71
2.3.1	Continuity from Above and Below	71
2.3.2	Cartesian Products	74
2.3.3	Linear Changes of Variable	75
2.4	Nonmeasurable Sets	81
2.4.1	The Axiom of Choice	81
2.4.2	Existence of a Nonmeasurable Set	82
2.4.3	Further Results	84
3	Measurable Functions	87
3.1	Definition and Properties of Measurable Functions	87
3.1.1	Extended Real-Valued Functions	88
3.1.2	Complex-Valued Functions	92
3.2	Operations on Functions	93
3.2.1	Sums and Products	93
3.2.2	Compositions	95
3.2.3	Suprema and Limits	96
3.2.4	Simple Functions	98
3.3	The Lebesgue Space $L^\infty(E)$	103
3.3.1	Convergence and Completeness in $L^\infty(E)$	105
3.4	Egorov's Theorem	107
3.5	Convergence in Measure	111
3.6	Luzin's Theorem	117
4	The Lebesgue Integral	119
4.1	The Lebesgue Integral of Nonnegative Functions	119
4.1.1	Integration of Nonnegative Simple Functions	121
4.1.2	Integration of Nonnegative Functions	123
4.2	The Monotone Convergence Theorem and Fatou's Lemma	126
4.2.1	The Monotone Convergence Theorem	127
4.2.2	Fatou's Lemma	130
4.3	The Lebesgue Integral of Measurable Functions	132
4.3.1	Extended Real-Valued Functions	133
4.3.2	Complex-Valued Functions	135
4.3.3	Properties of the Integral	136
4.4	Integrable Functions and $L^1(E)$	138
4.4.1	The Lebesgue Space $L^1(E)$	138
4.4.2	Convergence in L^1 -Norm	140
4.4.3	Linearity of the Integral for Integrable Functions	142
4.4.4	Inclusions between $L^1(E)$ and $L^\infty(E)$	143
4.5	The Dominated Convergence Theorem	146
4.5.1	The Dominated Convergence Theorem	147
4.5.2	First Applications of the DCT	149

4.5.3	Approximation by Continuous Functions	150
4.5.4	Approximation by Really Simple Functions	153
4.5.5	Relation to the Riemann Integral	154
4.6	Repeated Integration	161
4.6.1	Fubini's Theorem	161
4.6.2	Tonelli's Theorem	168
4.6.3	Convolution	171
5	Differentiation	177
5.1	The Cantor–Lebesgue Function	178
5.2	Functions of Bounded Variation	182
5.2.1	Definition and Examples	183
5.2.2	Lipschitz and Hölder Continuous Functions	186
5.2.3	Indefinite Integrals and Antiderivatives	187
5.2.4	The Jordan Decomposition	189
5.3	Covering Lemmas	194
5.3.1	The Simple Vitali Lemma	195
5.3.2	The Vitali Covering Lemma	196
5.4	Differentiability of Monotone Functions	200
5.5	The Lebesgue Differentiation Theorem	207
5.5.1	L^1 -Convergence of Averages	208
5.5.2	Locally Integrable Functions	210
5.5.3	The Maximal Theorem	210
5.5.4	The Lebesgue Differentiation Theorem	213
5.5.5	Lebesgue Points	216
6	Absolute Continuity and the Fundamental Theorem of Calculus	219
6.1	Absolutely Continuous Functions	220
6.1.1	Differentiability of Absolutely Continuous Functions	222
6.2	Growth Lemmas	223
6.3	The Banach–Zaretsky Theorem	229
6.4	The Fundamental Theorem of Calculus	234
6.4.1	Applications of the FTC	235
6.4.2	Integration by Parts	237
6.5	The Chain Rule and Changes of Variable	241
6.6	Convex Functions and Jensen's Inequality	245
7	The L^p Spaces	253
7.1	The ℓ^p Spaces	254
7.1.1	Hölder's Inequality	256
7.1.2	Minkowski's Inequality	259
7.1.3	Convergence in the ℓ^p Spaces	262
7.1.4	Completeness of the ℓ^p Spaces	264
7.1.5	ℓ^p for $p < 1$	265

7.1.6	c_0 and c_{00}	266
7.2	The Lebesgue Space $L^p(E)$	269
7.2.1	Seminorm Properties of $\ \cdot\ _p$	271
7.2.2	Identifying Functions That Are Equal Almost Everywhere	272
7.2.3	$L^p(E)$ for $0 < p < 1$	273
7.2.4	The Converse of Hölder's Inequality	274
7.3	Convergence in L^p -norm	277
7.3.1	Dense Subsets of $L^p(E)$	279
7.4	Separability of $L^p(E)$	284
8	Hilbert Spaces and $L^2(E)$	289
8.1	Inner Products and Hilbert Spaces	289
8.1.1	The Definition of an Inner Product	290
8.1.2	Properties of an Inner Product	290
8.1.3	Hilbert Spaces	292
8.2	Orthogonality	295
8.2.1	Orthogonal Complements	296
8.2.2	Orthogonal Projections	298
8.2.3	Characterizations of the Orthogonal Projection	302
8.2.4	The Closed Span	302
8.2.5	The Complement of the Complement	303
8.2.6	Complete Sequences	304
8.3	Orthonormal Sequences and Orthonormal Bases	305
8.3.1	Orthonormal Sequences	305
8.3.2	Unconditional Convergence	307
8.3.3	Orthogonal Projections Revisited	308
8.3.4	Orthonormal Bases	310
8.3.5	Existence of an Orthonormal Basis	312
8.3.6	The Legendre Polynomials	313
8.3.7	The Haar System	314
8.3.8	Unitary Operators	316
8.4	The Trigonometric System	320
9	Convolution and the Fourier Transform	327
9.1	Convolution	327
9.1.1	The Definition of Convolution	328
9.1.2	Existence	329
9.1.3	Convolution as Averaging	331
9.1.4	Approximate Identities	333
9.1.5	Young's Inequality	338
9.2	The Fourier Transform	344
9.2.1	The Inversion Formula	348
9.2.2	Smoothness and Decay	353
9.3	Fourier Series	360

9.3.1	Periodic Functions	361
9.3.2	Decay of Fourier Coefficients	362
9.3.3	Convolution of Periodic Functions	365
9.3.4	Approximate Identities and the Inversion Formula	365
9.3.5	Completeness of the Trigonometric System	371
9.3.6	Convergence of Fourier Series for $p \neq 2$	374
9.4	The Fourier Transform on $L^2(\mathbb{R})$	378
